User-Centered Design

Graduates of our MS in User-Centered Design program should feel equipped to develop an extensive portfolio of artifacts that demonstrate an advanced understanding of the human factors that influence design.

Program outcomes:

- Conceive, articulate and implement a design.
- Develop effective methods and criteria for system organization and evaluation of designs.
- Identify and apply social and psychological principles to predict and explain user response.
- Identify and apply social and psychological principles when conceiving and implementing designs.
- Identify the human factors that may influence user response and define appropriate solutions.
- Implement design thinking to foster innovation.
