

Nominators from this year and past years say:

“As a teacher she is known for her ability to create an interactive and supportive learning community inside and outside of the classroom. She is especially good at making challenging materials intriguing to students.”

“Her courses are very discussion-oriented, forcing students to think about the material rather than simply memorizing and regurgitating it for exams. She was always open to questions from the students both during and after class, and never failed to answer them clearly and thoroughly. The door to her office was literally always open, and she was always happy to talk to students.”

Over and over again her students say:

“She actually made reading scientific literature fun!”

“I never want to miss a class.”
