The Lemberg Program in International Economics and Finance
See Brandeis International Business School.

Library Intensive Program

The library intensive program is a special academic service that enables Brandeis students to develop the sophisticated information retrieval skills essential to modern life, in the context of formal degree programs and beyond. It is not a formal major, minor, or program.

In the courses listed below, instructional time is devoted to the formal acquisition of library research skills, including critical evaluation techniques and the use of more specialized databases, tools, and other online and print resources.

### Department of Mathematics

#### Objectives

**Undergraduate Major**
As our society becomes more technological, it is more affected by mathematics. Quite sophisticated mathematics is now central to the natural sciences, to ecological issues, to economics, and to our commercial and technical life. A student who takes such general-level courses as MATH 5a, 8a, 10a, 10b, 15a, or 20a will better understand the world and be prepared to act in it.

Mathematics is, at the same time, a subject of the greatest depth and beauty with a history extending from antiquity. The department attempts to make this depth and beauty manifest. The undergraduate major introduces students to some fundamental fields—algebra, real and complex analysis, geometry, and topology—and to the habit of mathematical thought. Mathematics majors may go on to graduate school, scientific research, or mathematics teaching, but many choose the major for its inherent interest, with unrelated career intentions.

**Graduate Program in Mathematics**
The graduate program in mathematics is designed primarily to lead to the doctor of philosophy degree. The formal coursework gives the student a broad foundation for work in modern pure mathematics. An essential part of the program consists of seminars on a variety of topics of current interest in which mathematicians from Greater Boston often participate. In addition, the Brandeis-Harvard-MIT-Northeastern Mathematics Colloquium gives the student an opportunity to hear the current work of eminent mathematicians from all over the world.

### Courses of Study:
- **Minor**
- **Major (BA)**
- **Combined BA/MA**
- **Master of Arts**
- **Doctor of Philosophy**

#### How to Become an Undergraduate Major
Students who enjoy mathematics are urged to consider majoring in it; Brandeis offers a wide variety of mathematics courses, and majors will have the benefits of small classes and individual faculty attention. To become a major a student should have completed either MATH 15a and 20a, or MATH 22a, 22b by the end of the sophomore year—these courses are prerequisites to the higher-level offerings. Therefore, it is important for students to start calculus and linear algebra (MATH 10a, 10b, 15a, 20a, or 22a) in the first year.

#### How to Be Admitted to the Graduate Program
The general requirements for admission to graduate work in mathematics are the same as those for the Graduate School as a whole. The department has available a variety of fellowships and scholarships for well-qualified students. To be considered for such financial support, the student should submit an application by January 15.
Faculty

Ruth Charney, Chair
Geometric group theory. Topology.

Mark Adler (on leave fall 2007)

Joël Bellaïche
Number theory.

Mario Bourgoïn
Knot theory.

Fred Diamond (on leave academic year 2007-2008)
Number theory.

Ira Gessel, Graduate Advising Head
Combinatorics.

Edward Goldstein
Differential geometry. Special structures on manifolds.

Ivan Horozov
Number theory.

Kiyoshi Igusa

Dmitry Kleinbock, Undergraduate Advising Head (on leave fall 2007)
Dynamical systems. Ergodic theory. Number theory.

Bong Lian, Undergraduate Advising Head (fall 2007)
Representation theory. Calabi-Yau geometry. String theory.

Alan Mayer
Classical algebraic geometry and related topics in mathematical physics.

Susan Parker, Elementary Mathematics Coordinator
Combinatorics. Elementary mathematics instruction.

Daniel Ruberman
Geometric topology and gauge theory.

Gerald Schwarz (on leave spring 2008)
Algebraic groups. Transformation groups.

James Sparks
Mathematical physics.

Pierre Van Moerbeke

Requirements for the Undergraduate Major

A. MATH 22a, or 15a; MATH 22b, or 20a.

B. MATH 23b or exemption. See item E in Special Notes Relating to Undergraduates.

C. MATH 35a, 40a, or 45a.

D. MATH 28a, 28b, or 30a.

E. Four additional semester courses, either MATH courses numbered 27 or higher or cross-listed courses. A course used to satisfy the requirements for the major must be passed with a grade of C- or higher.

Honors

A degree with honors requires items A, B, C, and D above, as well as:

E. Six additional semester courses, either MATH courses numbered 27 or higher or cross-listed courses, passed with at least a grade of B. At least four of the courses used to satisfy the major requirement must be honors courses. The honors courses are MATH 30a, 30b, 32a, 34a, 38b, 40a, 40b, 45a, and all MATH courses numbered 100 or higher.

Teacher Preparation Track

Students who complete the Brandeis program for Massachusetts High School Teacher Licensure (see section on Education Programs in this Bulletin) may earn a bachelor’s degree in mathematics by satisfying major requirements A, B, C, and D above and the following:

E. MATH 8a (Introduction to Probability and Statistics) or 36a (Probability).

F. Two additional courses, either MATH courses numbered 27 or higher or cross-listed courses.

G. A computer science course numbered 10 or higher.

H. Completion of the High School Teacher Licensure Program.

Combined BA/MA Program

Undergraduate students are eligible for the BA/MA program in mathematics if they have completed MATH 101a,b, 110a, 111a,b, and 121 a,b with a grade of B– or better and demonstrated a reading knowledge of mathematical French, German, or Russian. No more than three of these courses, however, may be counted toward the major. In addition, students must fulfill a minimum of three years' residence on campus. A student must make formal written application for admission to this program on forms available at the Graduate School office. This must be done no later than May 1 preceding his/her final year of study on campus.

Requirements for the Undergraduate Minor

A. MATH 22a, or 15a; MATH 22b, or 20a.

B. Three additional semester courses, either MATH courses numbered 27 or higher or cross-listed courses. Most MATH courses numbered 27 or higher require MATH 23b as a prerequisite.

Students interested in analysis, physics, or applied mathematics are advised to choose additional courses from among MATH 35a, 36a, 36b, 37a, and 45a. Students interested in algebra or computer science are advised to consider MATH 28a, 28b, 30a, 30b, and 38b. With permission of the undergraduate advising head, courses taken in other Brandeis departments or taken at other universities may be substituted for mathematics courses required for the minor. A course used to satisfy the requirements for the minor must be passed with a grade of C- or higher.
Special Notes Relating to Undergraduates

A. With permission of the undergraduate advising head, courses taken in other Brandeis departments or taken at other universities may be substituted for required mathematics courses. A grade of C or better is required in courses satisfying the major requirements.

B. Students who intend to take mathematics courses numbered 10 or higher should take the departmental placement exam. On the basis of the exam, recommendations are made placing students out of the first year of calculus or into MATH 5a, 10a, or 10b. Students receiving a score of 5 on the advanced placement MATH AB Exam or a score of 4 or more on the MATH BC Exam place out of the first-year calculus sequence. Students receiving a score of 4 on the MATH AB Exam or a score of 3 on the MATH BC Exam place out of first-semester calculus. Such students must take the departmental placement exam if they wish to place out of second-semester calculus. Questions about placement should be directed to the elementary mathematics coordinator or the undergraduate advising head.

C. The usual calculus sequence is MATH 10a, 10b, and 20a. Students may precede this with MATH 5a. Many students also take MATH 15a [Applied Linear Algebra], which has MATH 5a or placement out of MATH 5a as a prerequisite. Students with a strong interest in mathematics and science are encouraged to take MATH 22a,b in place of MATH 15a and 20a.

D. A student may not receive credit for more than one of MATH 15a and 22a, or MATH 20a and 22b. Similarly, a student may not receive credit for all three of MATH 28a, 28b, and 30a.

E. Students should normally take MATH 23b before taking upper-level courses [i.e., those numbered above 23]. For many students this means taking MATH 23b concurrently with MATH 15a, or MATH 20a, MATH 22a or b. Students may also take MATH 23b concurrently with MATH 35a and MATH 36a since these do not have MATH 23b as a prerequisite. A student may be exempted from the requirement of taking MATH 23b by satisfactory performance on a placement exam. The placement exam will be given at the beginning of the fall semester and the end of the spring semester.

F. Students interested in graduate school or a more-intensive study of mathematics are urged to include all of the following courses in their program:

1. MATH 22a and b.
2. MATH 30a and b.
3. MATH 35a or 40a and b.
4. MATH 45a.

A course numbered 100 or higher.

G. The following schedule determines course offerings in mathematics:

1. Offered every semester are MATH 5a, 10a and b, 15a, and 20a.
2. Offered once each year are MATH 8a, 23b, 28a and b, 30a and b, 35a, 36a and b, 37a, 40a and b, 45a.
3. In addition, the following semester courses are usually offered according to the following schedule:

   a. MATH 3a [Explorations in Mathematics] fall term odd-even years [e.g., 2007-08]
   b. MATH 28a [Introduction to Groups] fall term even-odd years (e.g., 2008-09)
   c. MATH 28b [Introduction to Rings and Fields] fall term odd-even years (e.g., 2007-08)
   d. MATH 32a [Differential Geometry] spring term even-odd years (e.g., 2008-09)
   e. MATH 34a [Introduction to Topology] fall term odd-even years (e.g., 2007-08)
   f. MATH 38b [Number Theory] spring term odd-even years (e.g., 2007-08)
   g. MATH 39a [Introduction to Combinatorics] fall term even-odd years (e.g., 2008-09)
   h. MATH 56a [Introduction to Stochastic Processes and Models] fall term odd-even years (e.g., 2007-08)

H. The number of cross-listed courses used to satisfy the requirements for the major, the honors, or teacher preparation track must not exceed two; for the minor, the limit is one.

Requirements for the Degree of Master of Arts

A. One year academic residency as a full-time student.

B. Successful completion of an approved schedule of courses: MATH 101a and b, MATH 110a, MATH 111a and b, and MATH 121a and b.

C. Proficiency in reading French, German, or Russian.

Requirements for the Degree of Doctor of Philosophy

Program of Study

The normal first year of study consists of MATH 101a and b, 111a and b, and 121a and b. With the permission of the graduate advisor, a student with superior preparation may omit one or more of these courses and elect higher-level courses instead. In this case the student must take an examination in the equivalent material during the first two weeks of the course. The second year’s work will normally consist of MATH 110a and higher-level courses in addition to preparation for the qualifying examinations described below and participation in the second-year seminar. Upon completion of the qualifying examinations, the student will choose a dissertation advisor and begin work on a thesis. This should be accompanied by advanced courses and seminars.

Teaching Requirements

An important part of the doctoral program is participation, as a teaching fellow, in a structured program of undergraduate teaching. During the spring semester of the first year, every student takes part in our teaching apprenticeship program to learn basic classroom teaching skills. All graduate students are then expected to teach a section of calculus or precalculus for at least four semesters, usually beginning in the second year of study. Teaching fellows must also enroll every fall semester in the Teaching Practicum, in which their teaching is evaluated and discussed.

Residence Requirement

The minimum academic residence requirement is three years.

Language Requirement

Proficiency in reading one of French, German, or Russian, and one other language [besides English] determined with the consent of the advisor.
Qualifying Examination
The qualifying examination consists of two parts: a major examination and a minor examination. Both are normally completed by the end of the third year. For the major examination, the student will choose a limited area of mathematics (e.g., differential topology, several complex variables, or ring theory) and a major examiner from among the faculty. Together they will plan a program of study and a subsequent examination in that material. The aim of this study is to prepare the student for research toward the PhD. The minor examination will be more limited in scope and less advanced in content. Its subject matter should be significantly different from that of the major examination.

Dissertation and Defense
The doctoral degree will be awarded only after the submission and acceptance of an approved dissertation and the successful defense of that dissertation.

Courses of Instruction

[1-99] Primarily for Undergraduate Students

MATH 1a Introduction to Mathematical Concepts
[ sn ]
Mathematical reasoning, where it would be expected and elsewhere. A variety of short topics involving games and puzzles, number theory, combinatorics, and topology. Usually offered every third year.
Staff

MATH 3a Mathematics for Elementary and Middle School Teachers
[ sn ]
An in-depth exploration of the fundamental ideas underlying the mathematics taught in elementary and middle school. Emphasis is on problem solving, experimenting with mathematical ideas, and articulating mathematical reasoning. Usually offered every second year; will not be offered 2007–2008.
Staff

MATH 5a Precalculus Mathematics
Does not satisfy the School of Science requirement.
Brief review of algebra followed by the study of functions. Emphasis on exponential, logarithmic, and trigonometric functions. The course’s goal is to prepare students for MATH 10a. The decision to take this course should be guided by the results of the mathematics placement exam. Usually offered every semester in multiple sections.
Ms. Parker and Staff

MATH 6a Mathematics for the Visual Arts
[ sn ]
A study of symmetry and shape from a mathematical perspective, and the role of mathematics in the art of various cultures. Emphasis on group projects to develop a hands-on understanding of the concepts. Non-majors are encouraged to enroll. Special one-time offering, spring 2008.
Mr. Drake

MATH 8a Introduction to Probability and Statistics
[ qr sn ]
Discrete probability spaces, random variables, expectation, variance, approximation by the normal curve, sample mean and variance, and confidence intervals. Does not require calculus, only high school algebra and graphing of functions. Usually offered every year.
Staff

MATH 10a Techniques of Calculus (a)
[ sn ]
Prerequisite: a satisfactory grade of C- or higher in MATH 5a or placement by examination.
Introduction to differential (and some integral) calculus of one variable, with emphasis on techniques and applications. Usually offered every semester in multiple sections.
Ms. Parker and Staff (fall), Staff (spring)

MATH 10b Techniques of Calculus (b)
[ sn ]
Prerequisite: A satisfactory grade of C- or higher in MATH 10a or placement by examination. Continuation of 10a. Students may not take MATH 10a and MATH 10b simultaneously. Introduction to integral calculus of one variable with emphasis on techniques and applications. Usually offered every semester in multiple sections.
Staff (fall), Ms. Parker and Staff (spring)

MATH 15a Applied Linear Algebra
[ sn ]
Prerequisites: MATH 5a and permission of the instructor, placement by examination, or any mathematics course numbered 10 or above. Students may not take more than one of MATH 15a, 21a, and 22a for credit. Matrices, determinants, linear equations, vector spaces, eigenvalues, quadratic forms, linear programming. Emphasis on techniques and applications. Usually offered every semester.
Staff (fall), Ms. Parker (spring)

MATH 20a Techniques of Calculus
Calculus of Several Variables
[ sn ]
Prerequisites: MATH 10a,b. Students may not take more than one of MATH 20a, 21b, and 22b for credit.
Among the topics treated are vectors and vector-valued functions, partial derivatives and multiple integrals, extremum problems, line and surface integrals, Green’s and Stokes’s theorems. Emphasis on techniques and applications. Usually offered every semester.
Mr. Sparks

MATH 22a Linear Algebra and Intermediate Calculus, Part I
[ sn ]
Prerequisite: MATH 10a,b or placement by examination. Students intending to take the course should consult with the instructor or the undergraduate administrator. Students may not take more than one of MATH 15a, 21a, or 22a for credit.
MATH 22a and MATH 22b cover linear algebra and calculus of several variables. The material is similar to that of MATH 21a and MATH 21b, but with a more theoretical emphasis and with more attention to proofs. Usually offered every year.
Mr. Lian (fall)

MATH 22b Linear Algebra and Intermediate Calculus, Part II
[ sn ]
Prerequisite: MATH 22a or permission of the instructor. Students may not take more than one of MATH 20a, 21b, or 22b for credit.
See MATH 22a for course description. Usually offered every year.
Mr. Lian (spring)

MATH 23b Introduction to Proofs
[ sn wi ]
Prerequisites: MATH 15a, 20a, 21a, 22a, or permission of the instructor. Emphasizes the analysis and writing of proofs. Various techniques of proof are introduced and illustrated with topics chosen from set theory, calculus, algebra, and geometry. Usually offered every semester.
Staff (fall), Mr. Kleinbock (spring)
MATH 28a Introduction to Groups
Prerequisites: MATH 23b and either MATH 15a, 21a, 22a, or permission of the instructor.
Groups. Lagrange’s theorem. Modulo n addition and multiplication. Matrix groups and permutation groups. Homomorphisms, normal subgroups, cosets, and factor groups. Usually offered every second year; will not be offered 2007–2008. Staff

MATH 28b Introduction to Rings and Fields
Prerequisites: MATH 23b and either MATH 15a, 21a, 22a, or permission of the instructor.
Fields. Z/p and other finite fields. Commutative rings. Polynomial rings and subrings of C. Euclidean rings. The quotient ring A/⟨f⟩. Polynomials over Z. Usually offered every second year. Staff

MATH 30a Introduction to Algebra, Part I
Prerequisites: MATH 23b and either MATH 21a, 22a, or permission of the instructor.
An introduction to the basic notions of modern algebra-rings, fields, and linear algebra. Usually offered every year. Staff [fall]

MATH 30b Introduction to Algebra, Part II
Prerequisites: MATH 30a or permission of the instructor.
A continuation of MATH 30a, culminating in Galois theory. Usually offered every year. Mr. Bellaiche

MATH 32a Differential Geometry
Prerequisites: MATH 23b and either MATH 21b, 22b, or permission of the instructor.
Results in the classical differential geometry of curves and surfaces are studied theoretically and also implemented as computer algorithms. Static images and animations of geometrical objects are illustrated using the mathematical visualization program 3D-XplorMath. Computer projects involving MathLab and Mathematica are important components of the course, and for those without prior experience in using these programming systems, appropriate training is provided. Usually offered every second year; will not be offered 2007–2008. Staff

MATH 34a Introduction to Topology
Prerequisites: MATH 23b and either MATH 21a and b, 22a and b, or permission of the instructor.
An introduction to point set topology, covering spaces, and the fundamental group. Usually offered every second year. Mr. Ruberman [spring]

MATH 35a Advanced Calculus
Prerequisites: MATH 15a, 21a, or 22a and MATH 20a, 21b or 22b.
Infinite series: convergence tests, power series, and Fourier series. Improper integrals: convergence tests, the gamma function, Fourier and Laplace transforms. Complex numbers. Usually offered every year.
Mr. Mayer [fall]

MATH 36a Probability
Prerequisites: MATH 20a, 21b, or 22b.
Mr. Goldstein

MATH 36b Mathematical Statistics
Prerequisites: MATH 36a or permission of the instructor.
Probability distributions, estimators, hypothesis testing, data analysis. Theorems will be proved and applied to real data. Topics include maximum likelihood estimators, the information inequality, chi-square test, and analysis of variance. Usually offered every year.
Mr. Adler [spring]

MATH 37a Differential Equations
Prerequisites: MATH 15a, 21a, or 22a and MATH 20a, 21b, or 22b.
A first course in ordinary differential equations. Study of general techniques, with a view to solving specific problems such as the brachistochrone problem, the hanging chain problem, the motion of the planets, the vibrating string, Gauss’s hypergeometric equation, the Volterra predator-prey model, isoperimetric problems, and the Abel mechanical problem. Usually offered every year.
Mr. Mayer [fall]

MATH 38a Number Theory
Prerequisites: MATH 23b and either MATH 21a, 22a, or permission of the instructor.
Congruences, finite fields, the Gaussian integers, and other rings of numbers. Quadratic reciprocity. Such topics as quadratic forms or elliptic curves will be covered as time permits. Usually offered every second year.
Mr. Horozov [fall]

MATH 39a Introduction to Combinatorics
Prerequisites: COSI 29a or MATH 23b
Topics include graph theory (trees, planarity, coloring, Eulerian and Hamiltonian cycles), combinatorial optimization (network flows, matching theory), enumeration (permutations and combinations, generating functions, inclusion-exclusion), and extremal combinatorics (pigeonhole principle, Ramsey’s theorem). Usually offered every second year; will not be offered 2007–2008. Staff

MATH 40a Introduction to Real Analysis, Part I
Prerequisites: MATH 23b and either MATH 21a and b, 22a and b, or permission of the instructor.
MATH 40a and 40b give a rigorous introduction to metric space topology, continuity, derivatives, and Riemann and Lebesgue integrals. Usually offered every year.
Mr. Bourgoin

MATH 40b Introduction to Real Analysis, Part II
Prerequisites: MATH 40a or permission of the instructor.
See MATH 40a for course description. Usually offered every year.
Mr. Mayer [spring]

MATH 45a Introduction to Complex Analysis
Prerequisites: MATH 15a, 21a, or 22a and MATH 20a, 21b, or 22b.
An introduction to functions of a complex variable. Topics include analytic functions, line integrals, power series, residues, conformal mappings. Usually offered every year.
Mr. Goldstein [spring]

MATH 47a Introduction to Mathematical Research
Prerequisites: MATH 23b or permission of the instructor.
Students work on research projects that involve generating data, making conjectures, and proving theorems, and present their results orally and in writing. Introduces applications of computers in mathematical research: symbolic computation, typesetting, and literature search. Usually offered every third year; will not be offered 2007–2008. Staff [fall]
MATH 56a Introduction to Stochastic Processes and Models

Prerequisites: MATH 15a, 20a, and 36a.
Basic definitions and properties of finite and infinite Markov chains in discrete and continuous time, recurrent and transient states, convergence to equilibrium, Martingales, Wiener processes and stochastic integrals with applications to biology, economics, and physics. Usually offered every second year.
Mr. Goldstein [spring]

MATH 98a Independent Research
Usually offered every year.
Staff

MATH 98b Independent Research
Usually offered every year.
Staff

[100-199] For Both Undergraduate and Graduate Students

Undergraduate students should consult with the instructor regarding the required background for each course.

MATH 101a Algebra I
Groups, rings, modules, Galois theory, affine rings, and rings of algebraic numbers. Multilinear algebra. The Wedderburn theorems. Other topics as time permits. Usually offered every year.
Mr. Igusa

MATH 101b Algebra II
Continuation of MATH 101a. Usually offered every year.
Mr. Horozov

MATH 110a Geometric Analysis
Mr. Ruberman

MATH 110b Differential Geometry
Riemannian metrics, parallel transport, geodesics, curvature. Introduction to Lie groups and Lie algebras, vector bundles and principal bundles. Usually offered every second year.
Mr. Ruberman

MATH 111a Real Analysis
Mr. Schwarz

MATH 111b Complex Analysis
The Cauchy integral theorem, calculus of residues, and maximum modulus principle. Harmonic functions. The Riemann mapping theorem and conformal mappings. Other topics as time permits. Usually offered every year.
Mr. Adler

MATH 121a Topology I
Fundamental group, covering spaces. Cell complexes, homology and cohomology theory, with applications. Usually offered every year.
Staff

MATH 121b Topology II
Continuation of MATH 121a. Manifolds and orientation, cup and cap products, Poincaré duality. Other topics as time permits. Usually offered every year.
Ms. Charney

MATH 150a Combinatorics
Mr. Gessel

MATH 150b Topics in Combinatorics
Possible topics include symmetric functions, graph theory, extremal combinatorics, combinatorial optimization, coding theory. Usually offered every second year; will not be offered 2007–2008.
Staff

[200 and above] Primarily for Graduate Students

All graduate-level courses will have organizational meetings the first week of classes.

MATH 200a Second-Year Seminar
A course for second-year students in the PhD program designed to provide exposure to current research and practice in giving seminar talks. Students read recent journal articles and preprints and present the material. Usually offered every year.
Mr. Gessel

MATH 201a Topics in Algebra
Introduction to a field of algebra. Possible topics include representation theory, vertex algebras, algebraic groups. Usually offered every year.
Mr. Lian

MATH 202a Algebraic Geometry I
Staff

MATH 202b Algebraic Geometry II
Continuation of MATH 202a. Usually offered every second year; will not be offered 2007–2008.
Staff

MATH 203a Number Theory
Basic algebraic number theory [number fields, ramification theory, class groups, Dirichlet unit theorem], zeta and L-functions [Riemann zeta function, Dirichlet L-functions, primes in arithmetic progressions, prime number theorem]. Usually offered every second year.
Mr. Bellaiche

MATH 204a T.A. Practicum
Teaching elementary mathematics courses is a subtle and difficult art involving many skills besides those that make mathematicians good at proving theorems. This course focuses on the development and support of teaching skills. The main feature is individual observation of the graduate student by the practicum teacher, who provides written criticism of and consultation on classroom teaching practices. Usually offered every year.
Staff

MATH 205b Commutative Algebra
Associated primes, primary decomposition. Filtrations, completions, graded rings. Dimension theory, Hilbert functions. Regular sequences, depth, regular local rings. Other topics as time permits. Usually offered every second year.
Mr. Horozov

MATH 206a Topics in Number Theory
Possible topics include class field theory, cyclotomic fields, modular forms, analytic number theory, ergodic number theory. Usually offered every year.
Mr. Horozov

MATH 207a T.A. Practicum
Teaching elementary mathematics courses is a subtle and difficult art involving many skills besides those that make mathematicians good at proving theorems. This course focuses on the development and support of teaching skills. The main feature is individual observation of the graduate student by the practicum teacher, who provides written criticism of and consultation on classroom teaching practices. Usually offered every year.
Staff

MATH 211a Topics in Differential Geometry and Analysis I
Possible topics include complex manifolds, elliptic operators, index theory, random matrix theory, integrable systems, dynamical systems, ergodic theory. Usually offered every year.
Mr. Kleinbock

MATH 212a Functional Analysis
Banach and Hilbert spaces, linear operators, operator topologies, Banach algebras. Convexity and fixed point theorems, integration on locally compact groups. Spectral theory. Other topics as time permits. Usually offered every second year, will not be offered 2007–2008.
Staff
MATH 221a Topology III
Vector bundles and characteristic classes. Elementary homotopy theory and obstruction theory. Cobordism and transversality; other topics as time permits. Usually offered every year.
Mr. Ruberman

MATH 221b Topics in Topology
Topics in topology and geometry. In recent years, topics have included knot theory, symplectic and contact topology, gauge theory, and three-dimensional topology. Usually offered every year.
Mr. Igusa

MATH 223a Lie Algebras
Mr. Schwarz

MATH 224b Lie Groups
Staff

MATH 250a Complex Algebraic Geometry I
Riemann surfaces, Riemann-Roch theorems, Jacobians. Complex manifolds, Hodge decomposition theorem, cohomology of sheaves, Serre duality. Vector bundles and Chern classes. Other topics as time permits. Usually offered every second year.
Mr. Mayer

MATH 250b Complex Algebraic Geometry II
Continuation of MATH 250a. Usually offered every second year.
Mr. Goldstein

MATH 299a Readings in Mathematics
Staff

MATH 301a Further Topics in Algebra
Staff

MATH 302a Topics in Algebraic Geometry
Staff

MATH 311a Further Topics in Analysis
Staff

MATH 321a Further Topics in Topology
Staff

MATH 326a Topics in Mathematics
Staff

MATH 399a Readings in Mathematics
Staff

MATH 401d Research
Independent research for the PhD degree. Specific sections for individual faculty members as requested.
Staff
