

Quantitative Biology Lectures

January 13-14, 2008

---

# Single-Particle Electron Microscopy

*Data Analysis and Model Reconstruction*

*James Z. Chen*

# *Topics*

---

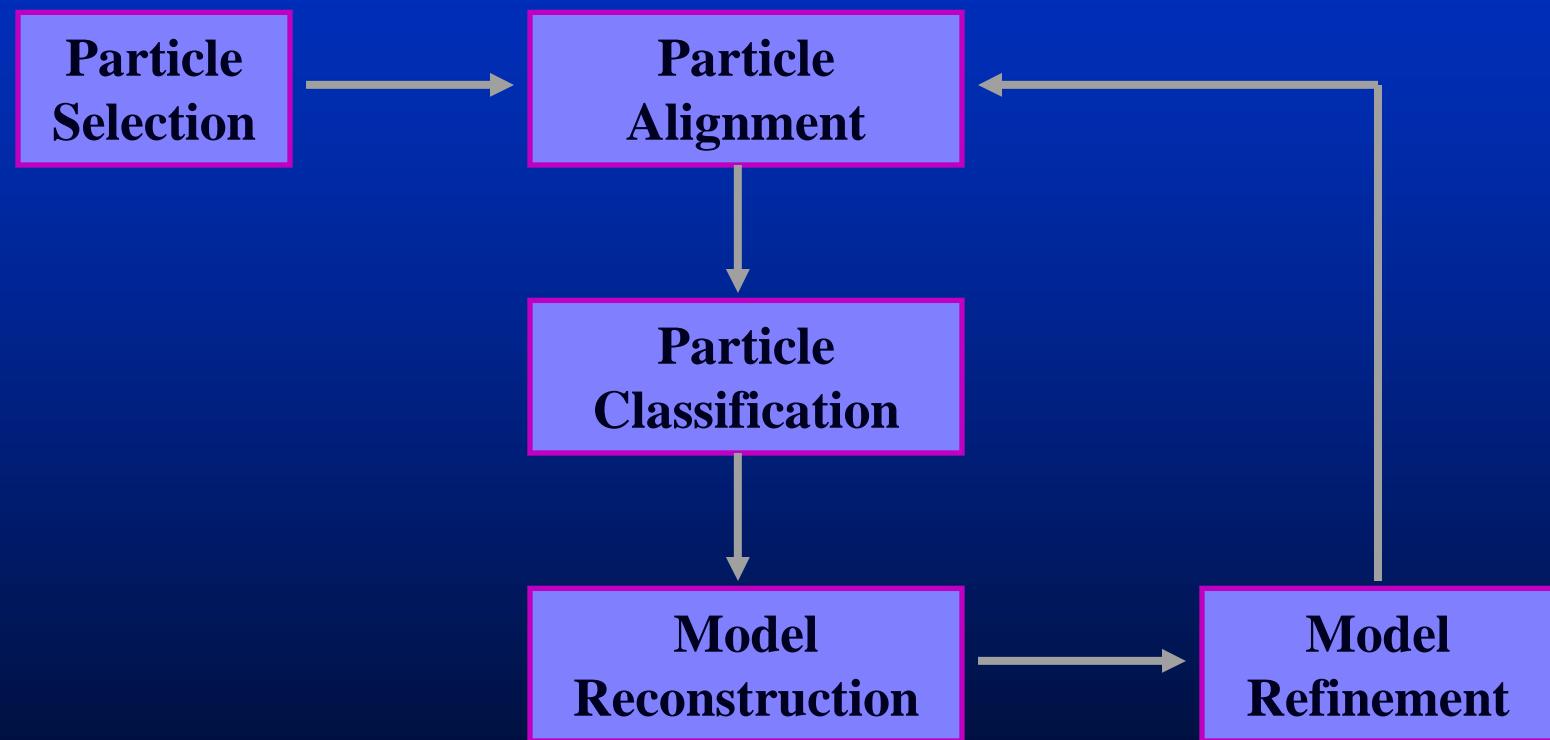

## **Common-Line Method**

- particle selection
- particle alignment & classification
- model reconstruction & refinement

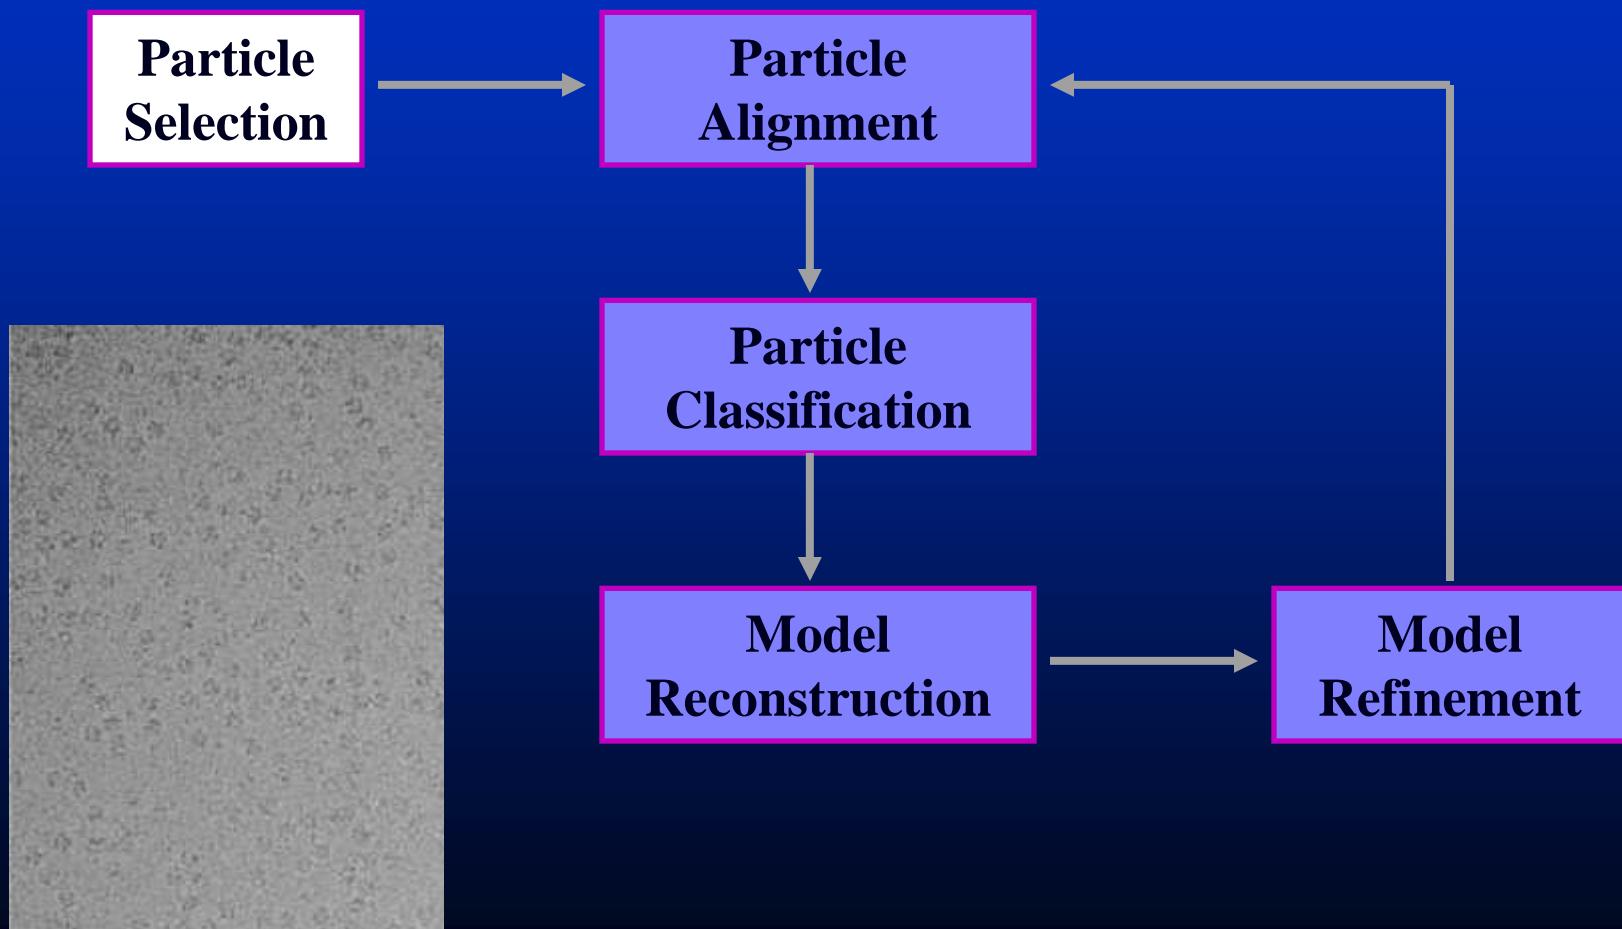

## **Random Conical Tilt**

- tilt-pair data collection
- direct reconstruction

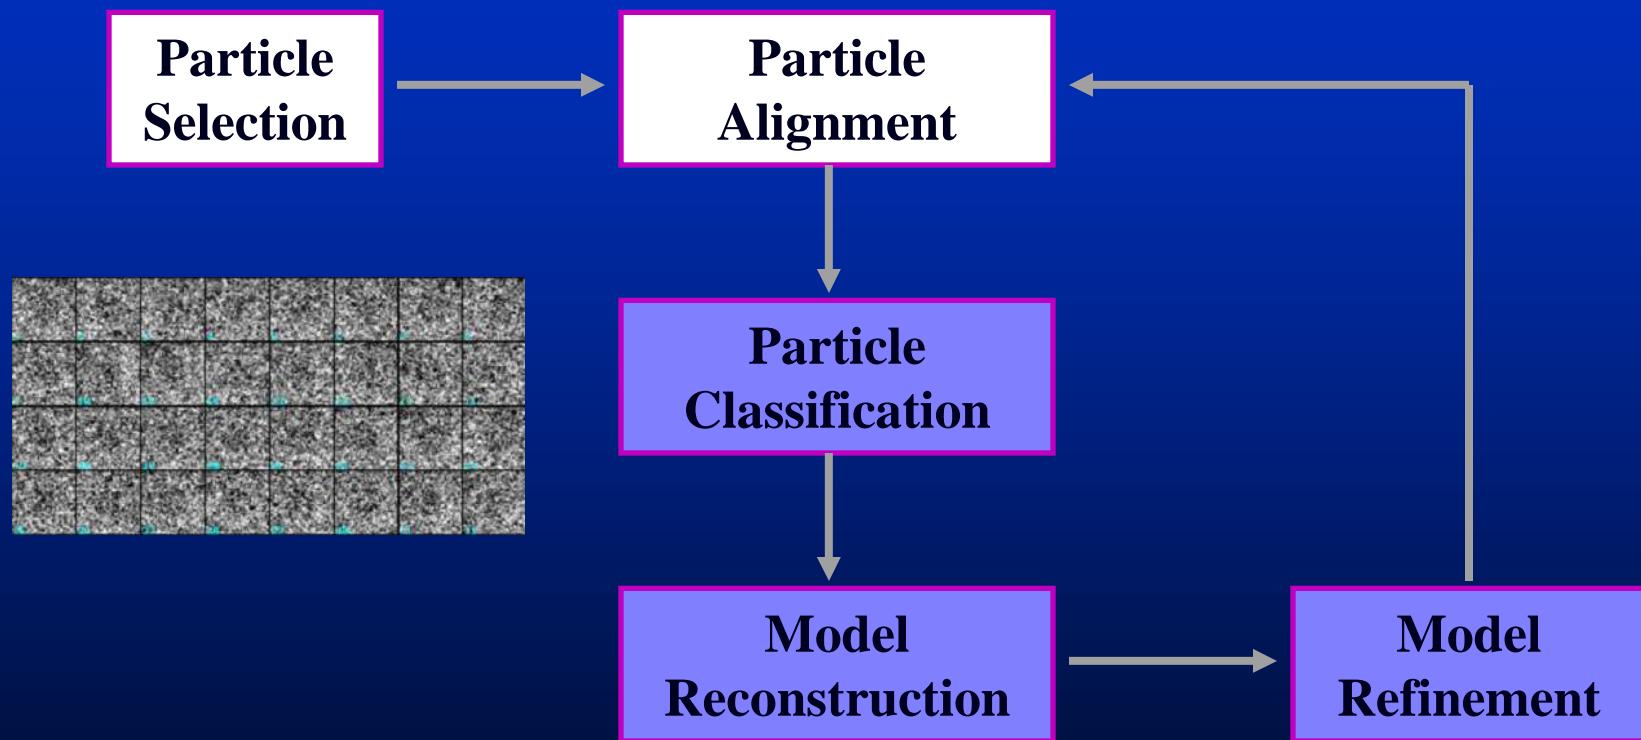

# *Data Processing Pipeline*

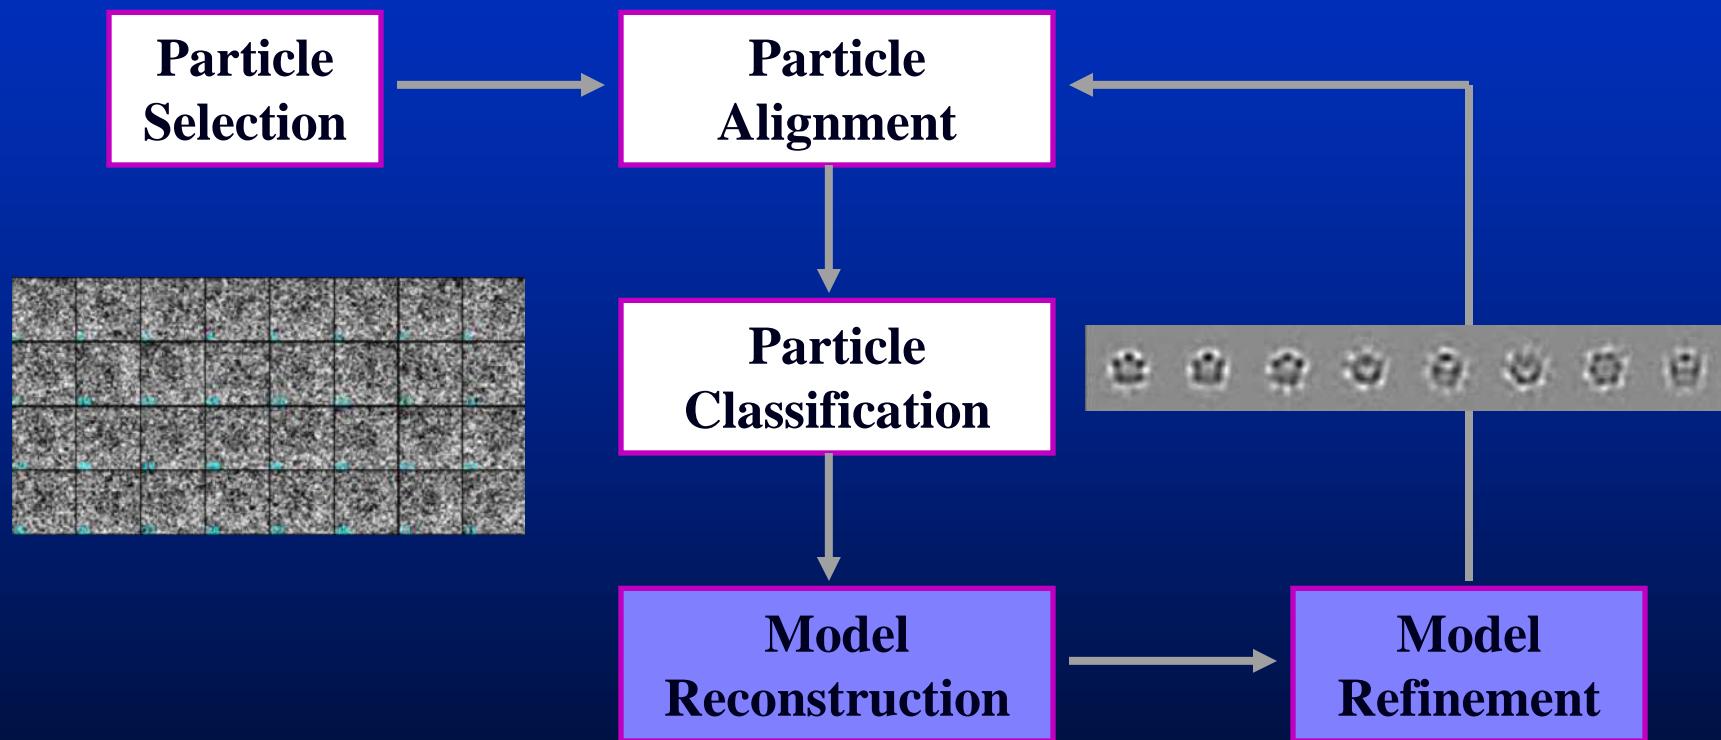

# *Data Processing Pipeline*

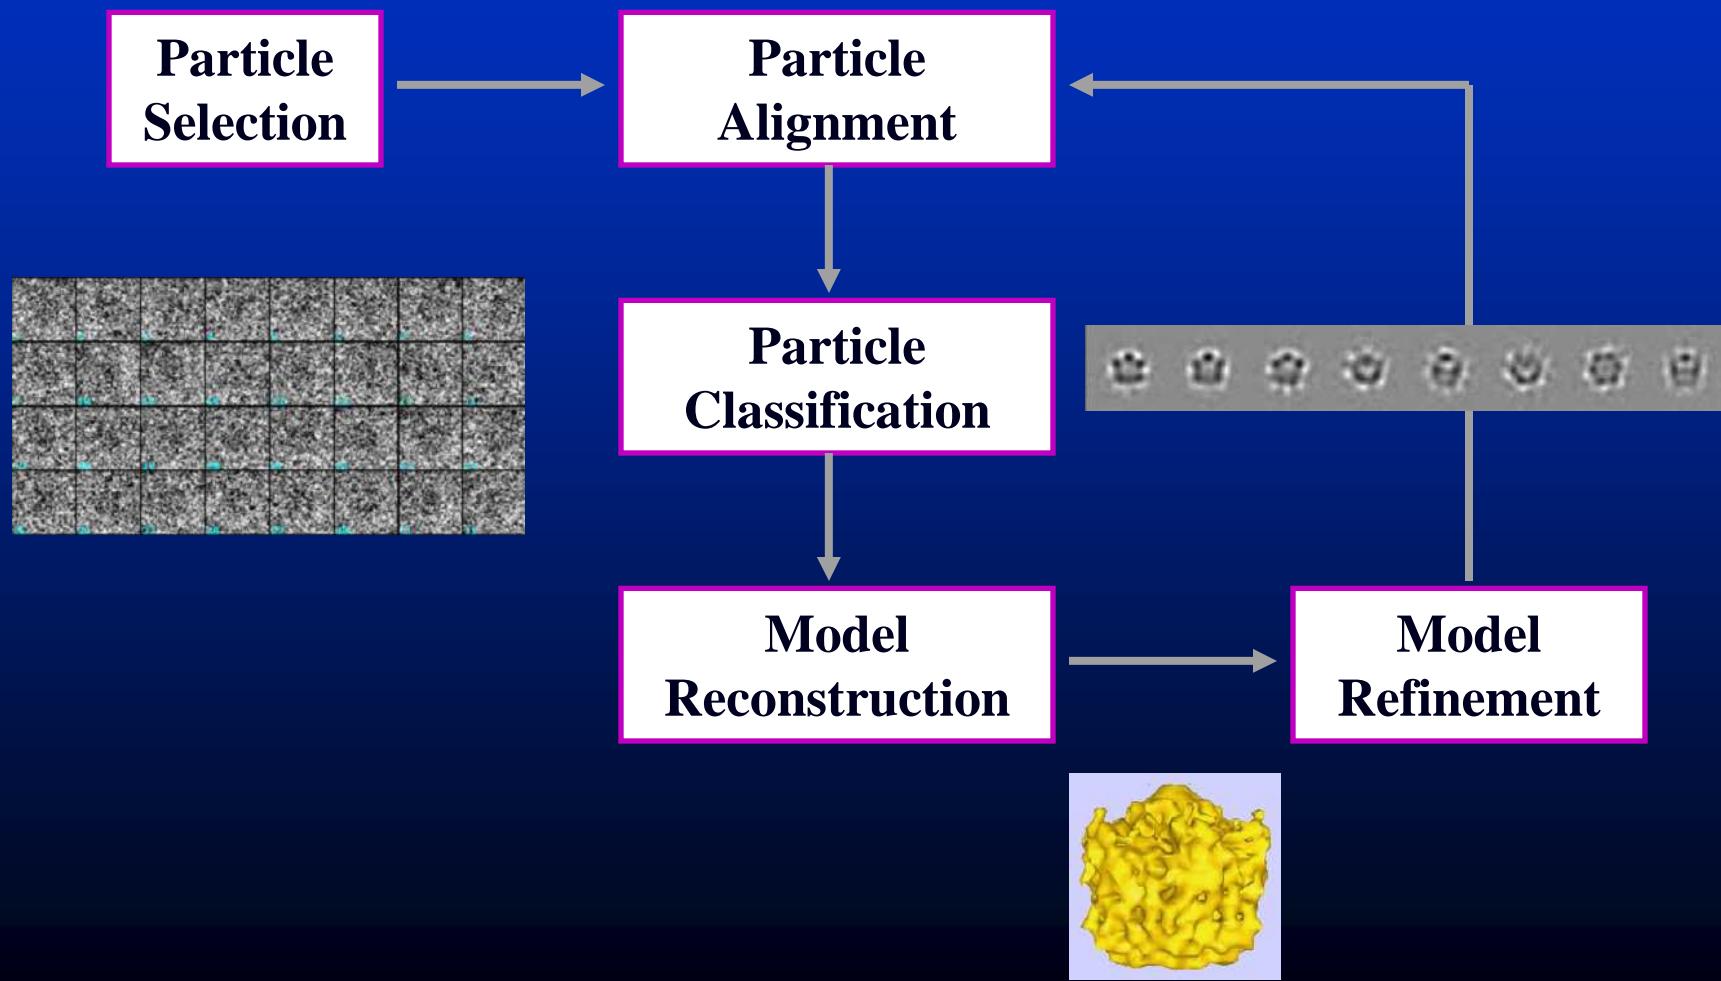

# *Data Processing Pipeline*

# *Data Processing Pipeline*

# *Data Processing Pipeline*

# *Particle Selection*

---

- manual annotation
- template matching
- computer vision
- neural network
- and more ...

# *Template Matching*

**Local Correlation Function (LCF) for image intensity matching**

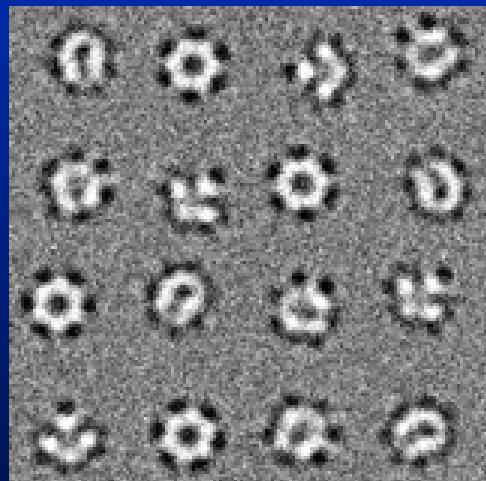

$$LCF(x) = \frac{1}{N_T \sigma(I_x)} \langle M_T \otimes T, I \rangle_x$$

**Spectra Correlation Function (SCF) for overall shape matching**

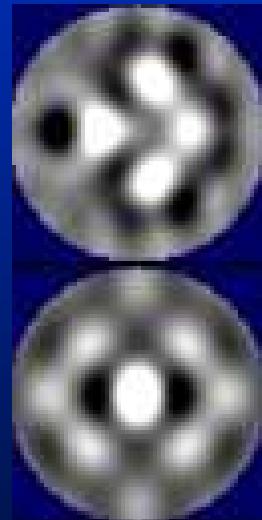

$$SCF(x) = \frac{1}{N_S \sigma(LCF_x)} \langle M_S \otimes ACF, LCF \rangle_x$$

$I$  is a template image,  $M_T$  and  $M_S$  are template masks,  $N_T$  and  $N_S$  are pixels under the respective masks. **ACF** is the auto-correlation function of  $I$ , and  $\sigma(\cdot)$  is the square-root of variance.

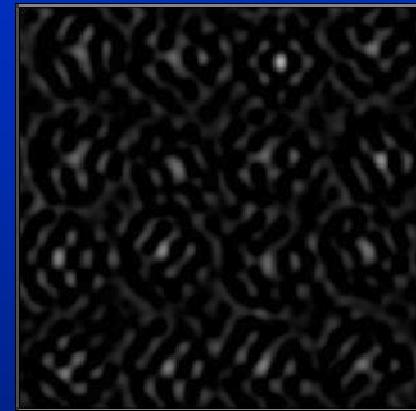

# *LCF & SCF Functions*

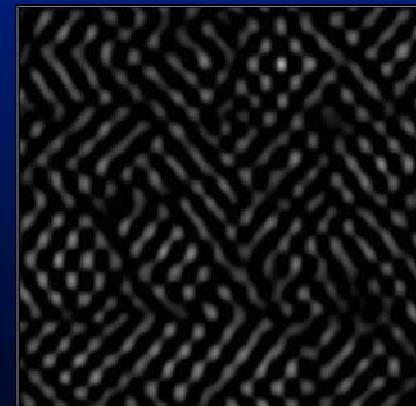

Micrograph

Template

LCF

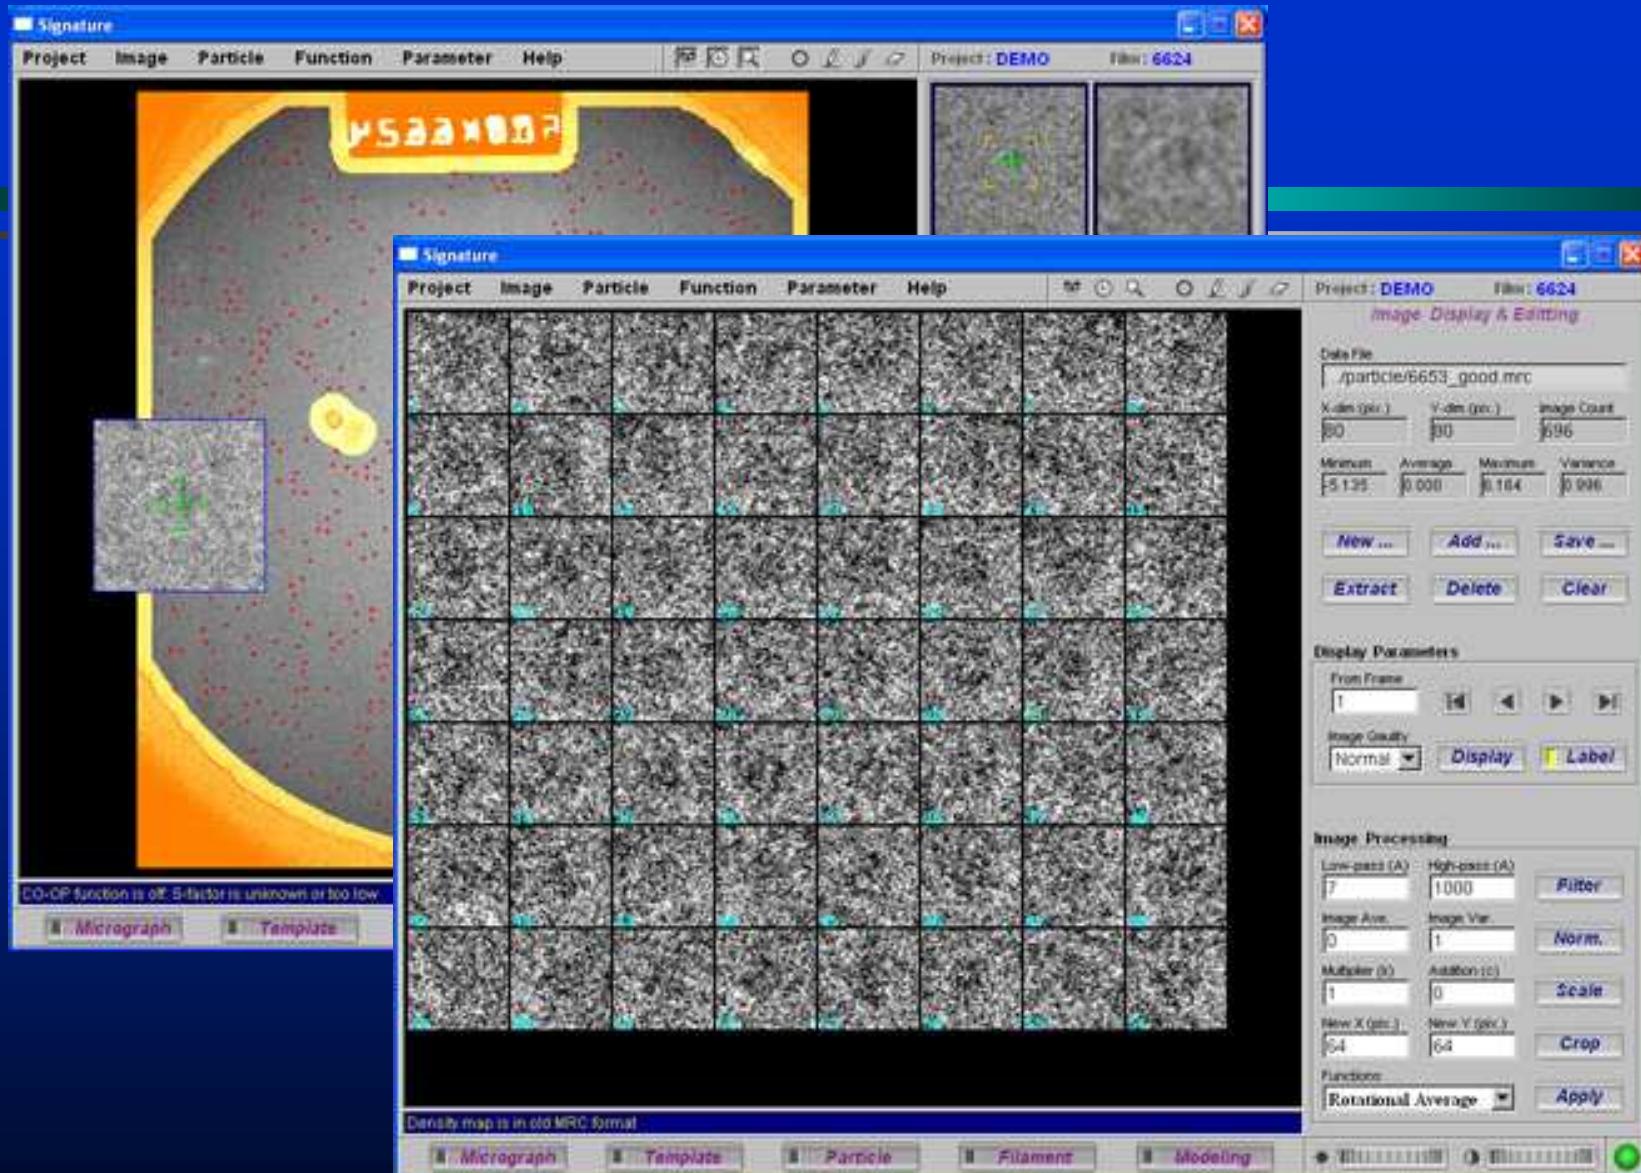

SCF

# *Sourceless of Templates*

---

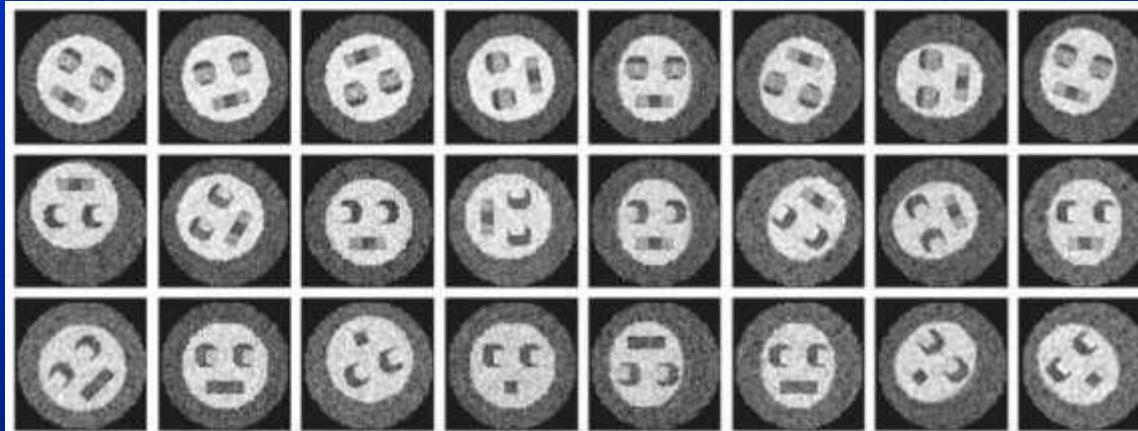

Depending on the stage of development, template images may come from

- ✓ Particle images cropped directly from a micrograph
- ✓ Class averages from a sizable particle dataset
- ✓ 2D projections from a 3D density model

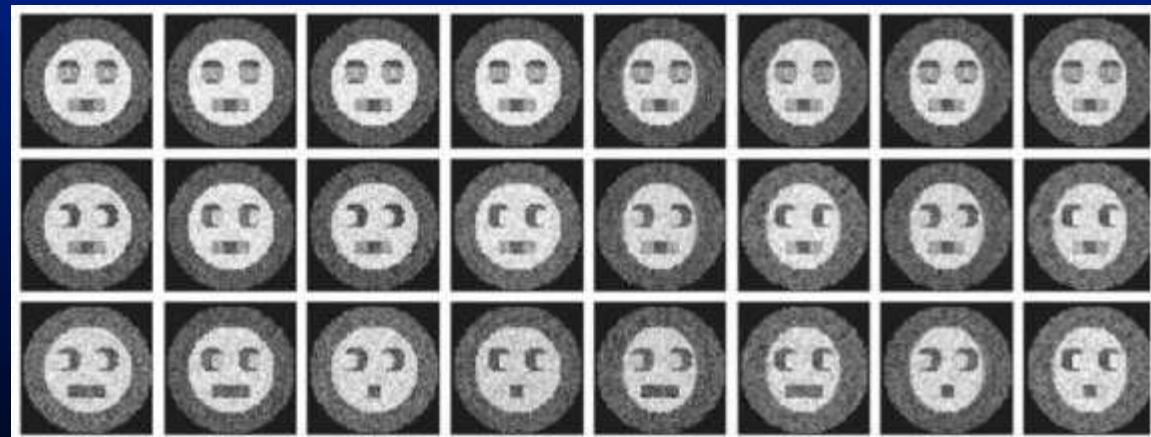

*emilab.rose2.brandeis.edu/grigorieff/downloads/signature*

# *Particle Alignment*

## **2D Alignment**

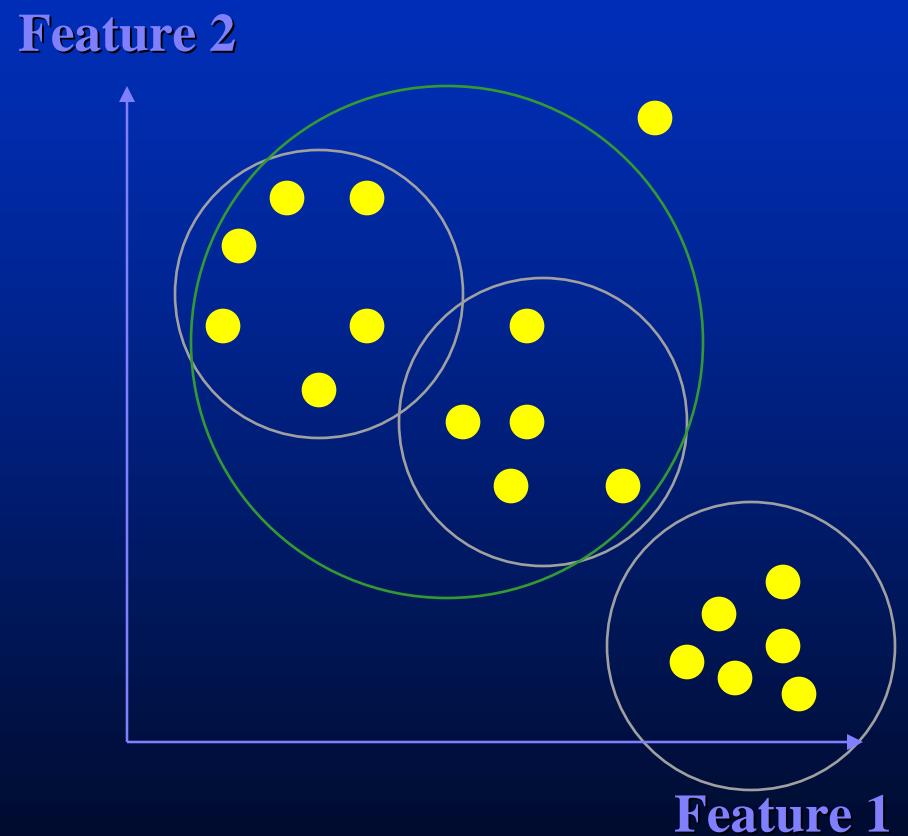

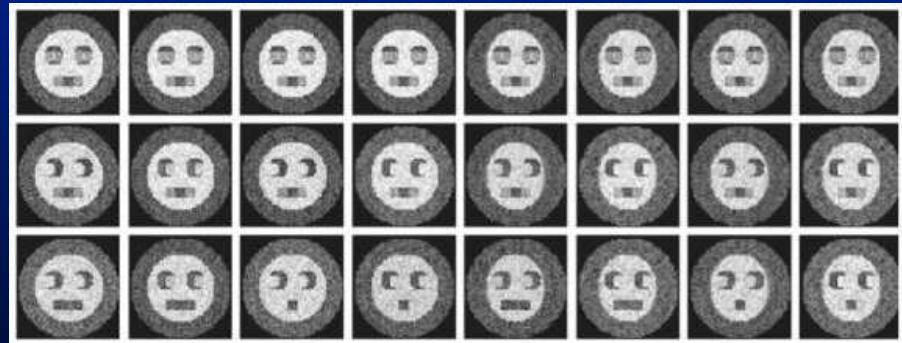

- Translation
- Rotation

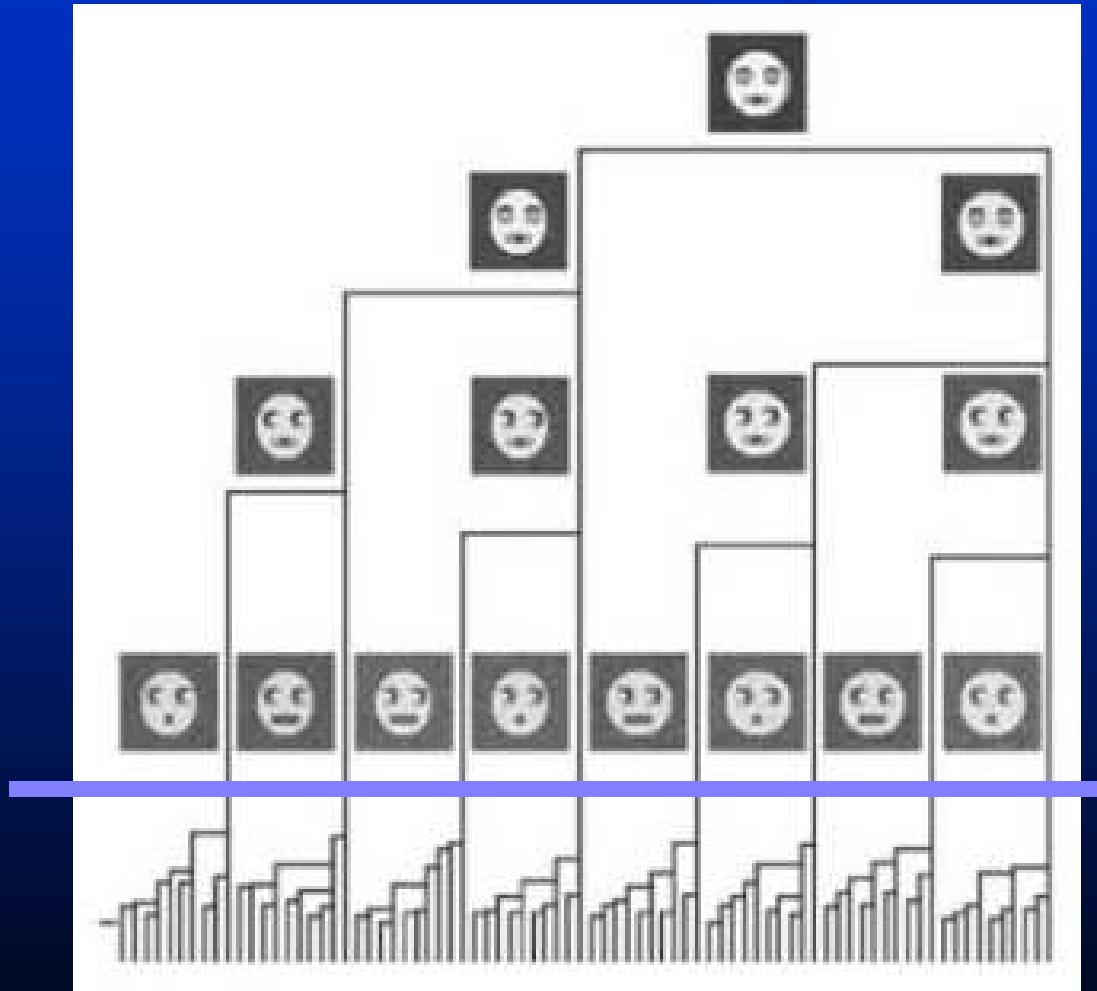

# *Particle Classification*

**Goal: improve SNR by class averaging**

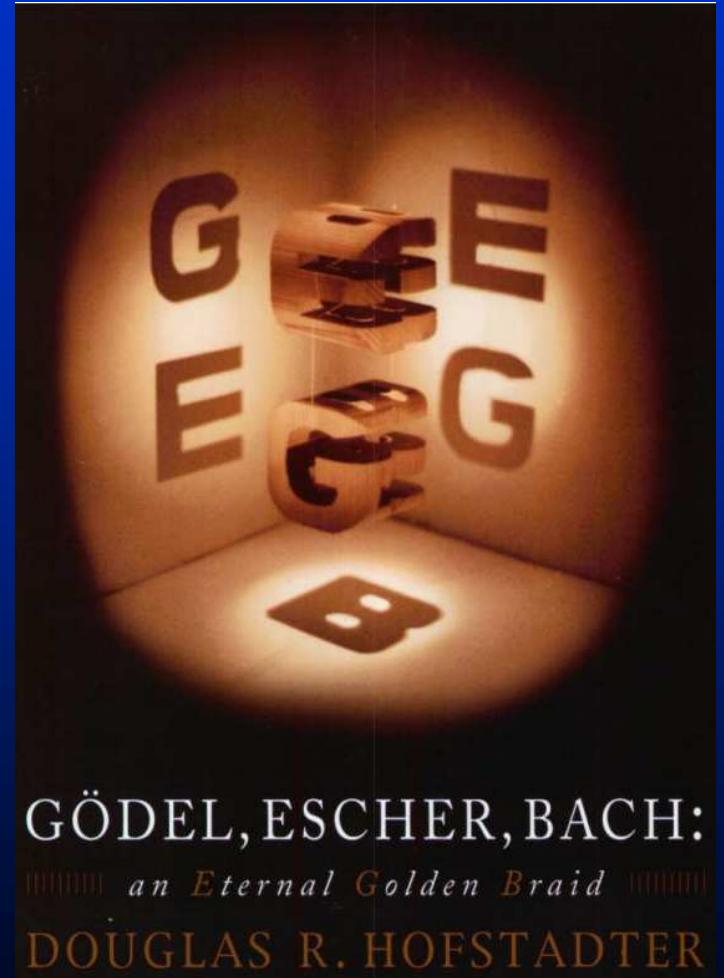

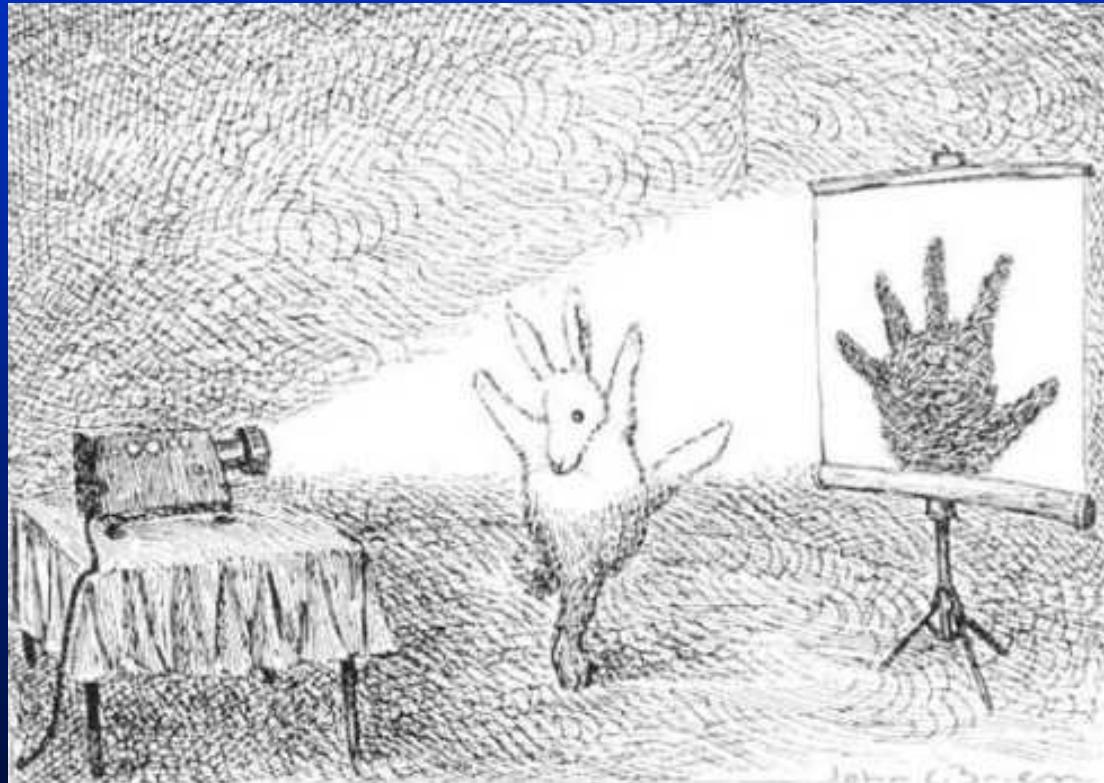

- PCA to identify eigen images (modes)
- decompose images in the eigen-space
- find point clusters  $\Rightarrow$  classes

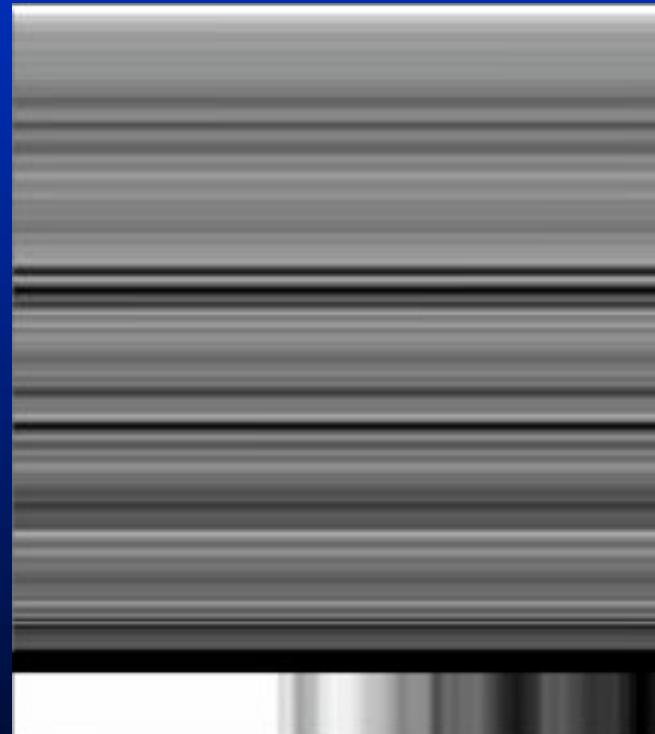

# *Particle Classification*

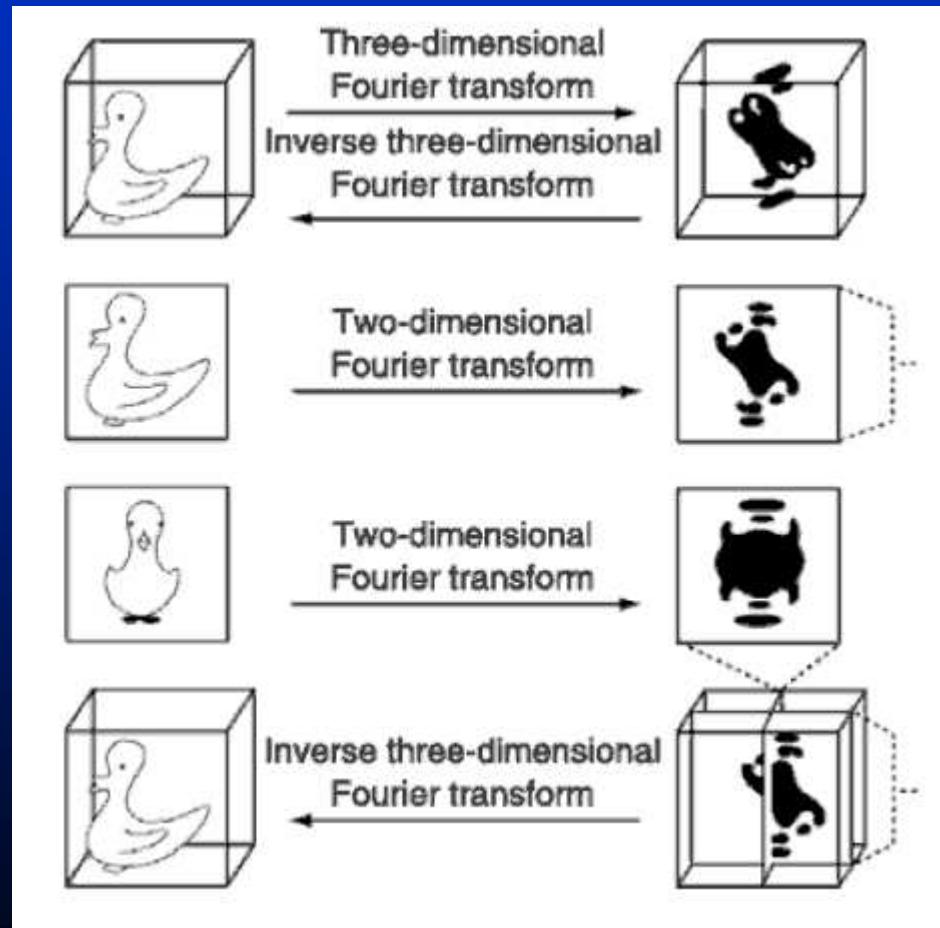

# *Model Reconstruction*

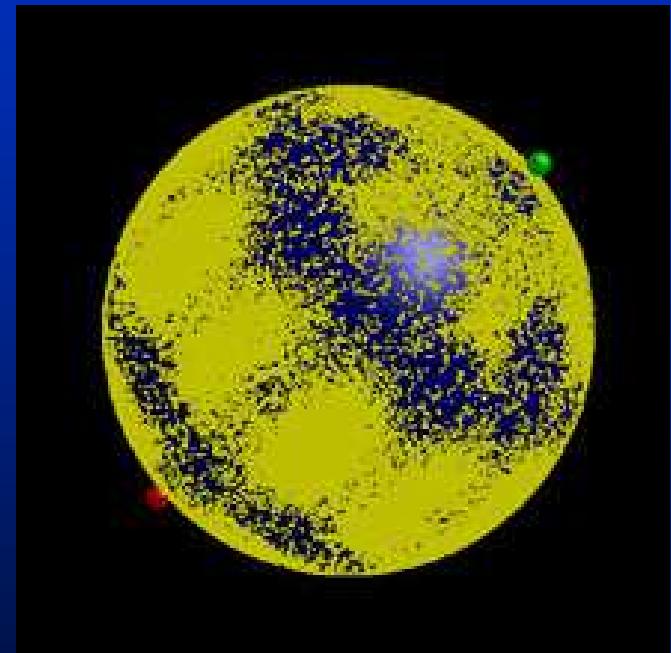

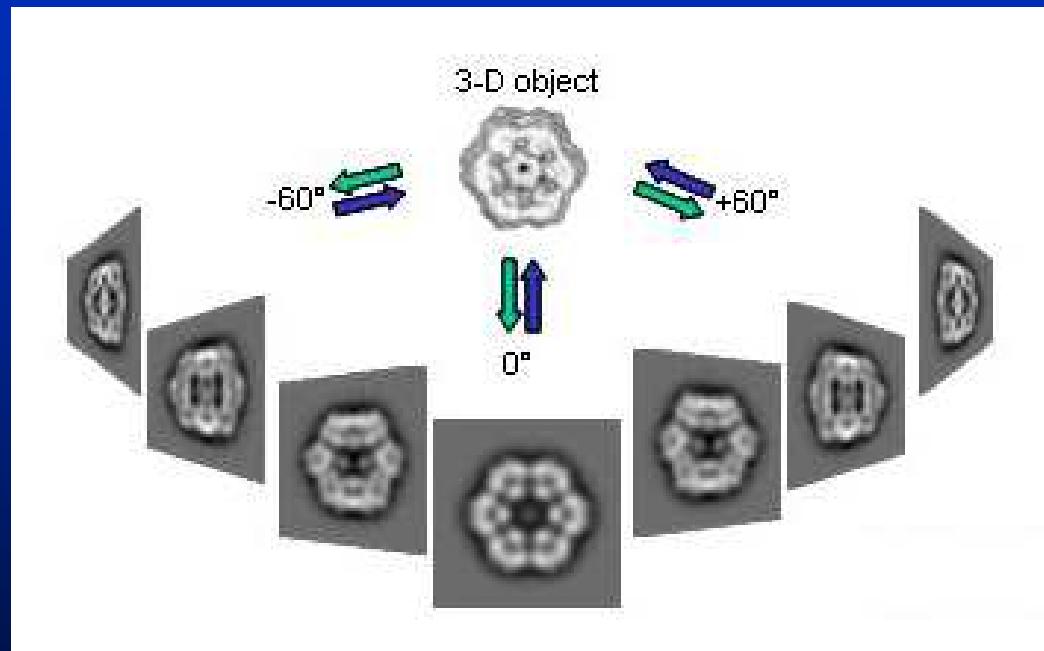

# *Back Projection*

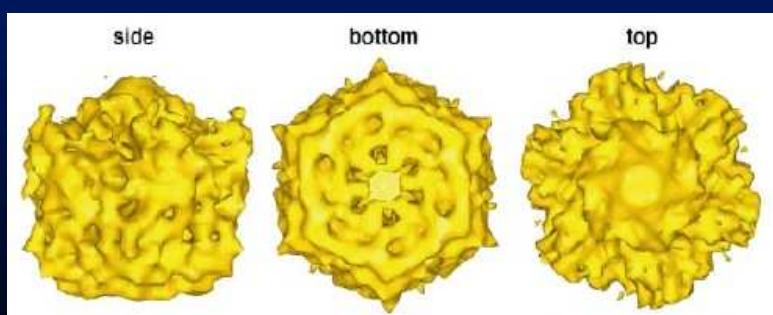

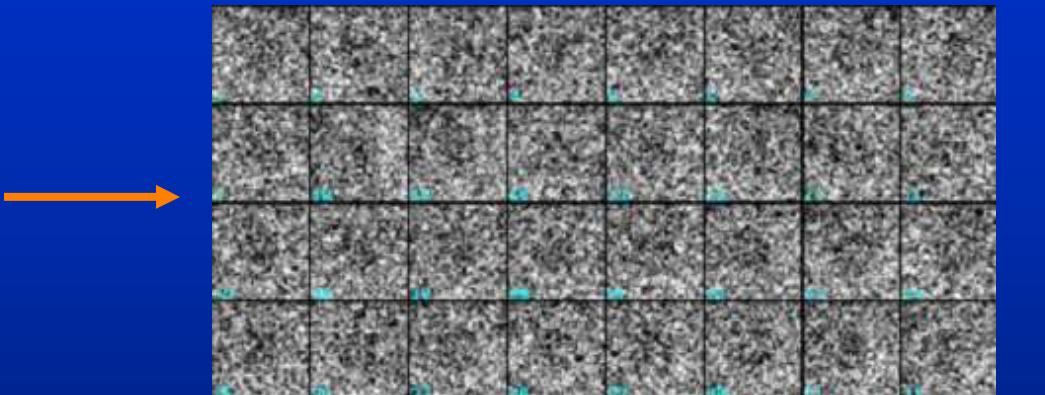

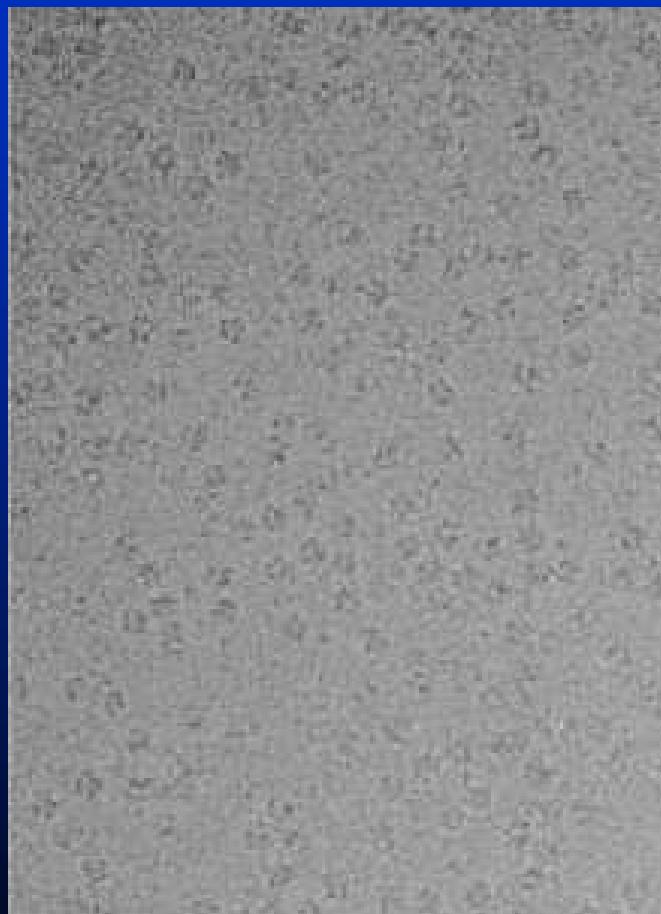

# *Common-Line Principle*

# *Model Reconstruction*

# *N*-ethyl Maleimide Sensitive Factor

# *Structural Analysis*

---

- PDB-map docking
- Structure prediction
- High-resolution EM
