Course Objectives
This course reviews in detail human skeletal anatomy for the proper identification of the bones in the body, their biomechanical articulations and their relationship with the muscular system. Focus is then directed to studying forensic methods and techniques for the estimation of age at death, determination of sex, assessment of type of bone remodeling, identification of cultural modifications to bone, and of the impact of environmental processes on bony tissue. Hands-on laboratory sessions will involve team analysis of human remains from the comparative collection in the Archaeology Laboratory at Brandeis.

Learning Goals
The aim of the course is for students to have full command of human skeletal anatomy and of basic forensic techniques, to learn how to do teamwork during the class project, and to learn how to design and carry out scientifically oriented research. The latter involves the empirical collection of data, the use of both quantitative and qualitative analyses, the formulation of explicitly stated hypotheses, and their rejection on the bases of the analysis of evidence. Furthermore, students will have the opportunity to practice their writing skills by submitting an analytical and interpretative report.

**Students with extra challenges**
If you are a student with a documented disability at Brandeis University and if you wish to request a reasonable accommodation for this class, please see me immediately. Keep in mind that reasonable accommodations are not provided retroactively.
**Four-Credit Course (with three hours of class-time per week)**
Success in this 4 credit hour course is based on the expectation that students will spend a minimum of 9 hours of study time per week in preparation for class (readings, response to questions, preparation for discussions, writing of papers, preparation for exams, etc.).

**Reading assignments**
Reading assignments should be completed by the dates indicated above. The assigned chapters from the textbook by Schwartz should be done while studying the skeletal comparative collection in the Lab. Other readings are posted on Latte. Reading of all assigned materials is essential for your engagement in class. Attendance to class is obligatory. Absence from classes will only be accepted in cases of medical or extreme emergencies, and should be notified in person or by email PRIOR to the intended missed class.

**Exams**
There will be two exams (first exam worth 25% of the final grade, and second exam worth 35% of the final grade). Each examination involves identifying complete and partial human bones and applying forensic techniques to specific bone stations. The exams are accumulative in order to reinforce your knowledge of skeletal anatomy.

**Short written assignment**
There is one written review of the video *Mystery of the First Americans*. The review should have a maximum of three double-spaced typed and numbered pages. It needs to address three points: 1) A synthetic summary of the core ideas (half page), a critical evaluation of the main points (two pages), and a general assessment of the effectiveness of the video (half page). In order to critically evaluate the main point, students need to engage the authors listed in the bibliography below (Owsley and Jantz 2001; Jones and Harris 1998; Meighan and Gulliford (1992); and Meighan and Zimmerman (1994). If you cite from any source, you should include an extra page listing your bibliography. The review should be submitted electronically and counts 10% of the final grade.

**Team Project**
The analysis of commingled remains will be presented as group reports. On August 2nd each group will submit a draft of the final paper for revision. The draft will be returned on August 6th. The final version of the paper is due on August 10th no later than 5 pm. Papers should be 5-6 pages of text, including a spreadsheet with the raw data and the bibliography. Photographs, illustrations and diagrams are also encouraged. The report should be submitted in both printed and electronic formats. The report contributes 30% of the final grade. No papers will be accepted after the submission deadline. **Papers should follow the stylistic and formatting guidelines of the SSA (Society for American Archaeology). These guidelines can be accessed at** [http://www.saa.org/StyleGuideText/tabid/985/Default.aspx](http://www.saa.org/StyleGuideText/tabid/985/Default.aspx)

The grading of the papers will be based on their content, the logic of the argumentation, the relationship between stated hypotheses and data used to test them, the clarity of the writing, and the adherence to the stylistic guidelines.
Summary of grading

First exam 25%
Second exam 35%
Video review 10%
Team project 30%

Use of laptops and tablets

Students are welcome to use a laptop computer or a tablet in class provided it is used for taking notes, for web searches specifically related to the topic being discussed, or for collecting the data for the team project. If a student is found using the laptop or other devices for purposes unrelated to the class, his/her right to use it will be immediately suspended for the rest of the summer session. The use of phones is not permitted.

Academic Integrity

Academic integrity is central to the mission of educational excellence at Brandeis University. Each student is expected to be familiar with, and to follow, the University’s policies on academic integrity. Please consult Brandeis University Rights and Responsibilities (http://www.brandeis.edu/studentaffairs/srcs/rr/) for all policies and procedures. All policies related to academic integrity apply to in-class and take home projects, assignments, exams, and quizzes. Students may only collaborate on assignments with express permission. Allegations of alleged academic dishonesty will be forwarded to the Director of Academic Integrity. Sanctions for academic dishonesty can include failing grades and/or suspension from the university.
